

**SCALEABLE MESSAGE DISSEMINATION**  
**SYSTEM AND METHOD**

**Abstract**

5 A system and method for the dissemination of information to a plurality of nodes,  
the nodes connected in a network environment. Each node maintains a partial view of the  
network that identifies some of the other network nodes. The act of sending the message  
to a plurality of nodes further comprises delivery of the message to all nodes identified in  
the partial view. The partial view is created through a decentralized subscription process.
